Pacific Test Equipment

Your experts in test and measurement solutions

LATEST NEWS :

Congratulations to our latest Facebook competition winner - Lewis O'Brien of Gladstone Qld who won the Sonel Clamp on Meter. Thank you for all of the entries.

Today we are kicking off our next competition to win a Sonel P-2 Voltage & Continuity Tester. See details below on how to enter.

I would like to focus this newsletter on the **VALUE ADD SERVICES** we provide our customers. At Pacific Test Equipment the sales relationship is not confined to the period between the order and the invoice.

QUALIFIED ENGINEERS - From the time we receive your enquiry, we work with you to understand your requirements and ensure we supply the best product to meet your needs. Where we differ from other suppliers, is that our sales team are all qualified electrical engineers and can operate each item in actual field conditions.

ON-SITE DEMONSTRATIONS - In many cases we can bring the products to you and demonstrate the benefits of each, to help you decide which one is right for you. With more sophisticated products, we have extensive application notes from the manufacturer written from actual field experiences in many countries including Australia.

24/7 HELP - When you make your selection and we supply your product, training is available to help you get the most from your investment. We also offer 24/7 phone assistance. If you encounter a problem in the field, call us, we can usually diagnose the problem and get you on your way.

FULL LIFE SERVICE - We support you for the life of your product and offer calibration and full service from our well-equipped Sydney laboratory. Unlike our competitors who usually return items to the overseas manufacturer for service, we are able to complete this right here in Australia saving you many weeks of lost time. For major items, we often are able to supply a loan instrument to keep you working while your instrument is serviced.

CHOICE OF BRAND - Pacific Test Equipment are authorised service agents for Sonel, DV-Power, AEMC and many other quality international brands.

TRADE - INs - When it comes time to upgrade your instrument to the latest model, we offer our customers a trade-in on many of the more sophisticated models to allow you to update to the latest technology for an attractive price.

EXPERTS HERE TO HELP - Before you are tempted to buy where the service and support ends when you pay the bill, consider the value of whole of life support and peace of mind you receive by buying from the experts at Pacific Test Equipment.

Give us a call and experience the difference with our professional team.

Kind regards, Keith Bensley

AEMC - for all your Electrical Test and Measurement Instruments

LATEST PRODUCT NEWS

The TRMS Clamp-on Meter Model 603 provides a new standard for safety and measurement capability not available in any other clamp meter sold today. Safety Rated at 1000V CAT IV, it is safe to operate in all electrical environments. It is rugged enough for the most demanding work environments and will withstand both dust and water spray with its IP54 rating. It is ergonomically designed and easily used by one hand, including function selection and button pushing even with a glove on.

WE ARE IN THE PRESS

AND TAP CHANGER ANALYSIS

A 3-phase Tap Changer and Winding Analyser coupled with advanced software is a powerful diagnostic solution that makes testing of power transformers easier safer and significantly faster than other methods.

We are in the Aug/Sep issue of Transmission and Distribution - click [here](#) for the full article.

NEW COMPETITION TO WIN
