DV-Power - end of year special

Hand-held Circuit Breaker Analyser at a never to be repeated price!

Price reductions and specials are not common in the quality end of the test & measurement market but DV-Power have sprung a great deal on their popular hand held Circuit Breaker Analyser & Timer which already weighs less, costs less and performs better than what you are probably using now!

The DV-Power CAT-P Circuit Breaker Analyser incorporates all the necessary functions for distribution breaker analysis into a hand-held unit weighing just 1.4kg, less than half that of the nearest competitor! It supports on-line and off-line testing, analyses trip coil current and voltage, main and auxiliary contact timing, substation battery condition, resistance & timing of pre-insertion resistors and lots more. Power is from rechargeable Li-Ion batteries which provide superior duty cycle compared to old technology NiMh.

The large 5.7" colour touch screen allows full

set up and display of numeric and graphical results with the ability to overlay 4 graphical records for easy comparison. Test results are either stored on the internal memory, saved to a USB stick or exported to a PC via the included DV-Win software which supports analysis, printing, export and test report generation.

Customers will save themselves over \$2,000 off the recommended list price if they order before 31 December 2017. Call or email us now and take advantage of this unique offer while it lasts.

Kind regards, Keith Bensley

DVPower - Smart test devices for reliable power systems

Calibration and Service Laboratory

One of our team working in our fully equipped calibration and service laboratory.

We offer a quality calibration and repair service for most brands of electrical instruments. All calibrations are performed with NATA calibrated standards and are traceable to National Standards. We are the Australia/NZ service centre for AEMC, Amptec, Chauvin Arnoux, Cropico, Dranetz, DV-Power, Elcon, N4L and Sonel.
